EDUCATION

Yale-NUS College Singapore

Bachelor of Science in Math and Computer Science; Minor in Economics; GPA: 4.86/5.00 May 2025

Relevant Coursework: Parallel Programming, Programming Language Design, Machine Learning

Professional Certification: AWS Cloud Practitioner

Awards: Kewalram Chanrai Full Scholarship

EXPERIENCE

Evooq Software Engineering Intern Swiss Wealth and Asset Management SaaS

Jan 2024 - Apr 2024

- GenAI Trading Tool: Built a Python application that uses large language models to generate trading strategies, simulate these strategies on historical data, and produce a report on the performance.
- Chatbot for Querying Data: Engineered a Python-based chatbot leveraging large language models to query data and generate charts from a MariaDB database through natural language prompts.

Hatcher+ Software Engineering Intern Singaporean Venture Capital SaaS May 2023 - Aug 2023

- Data Parsing Microservice: Engineered a Python microservice from scratch to parse excel company capitalization documents into structured JSONs using a large language model, saving data entry time.
- Employee Leave System: Built an employee leave system using Vue.js, Laravel, and MySQL to handle employee data, manage leave requests, and display leave information on employee calendars.
- Investment Data Smart Contract: Authored a smart contract in Golang to store investment information on the AWS Hyperledger Fabric blockchain network to facilitate reliable data storage.

Switcheo Labs Software Engineering Intern Singaporean Cryptocurrency Exchange Oct 2022 - Dec 2022

- Consolidated Search API: Developed a Golang API to aggregate and consolidate data from multiple databases into a single, unified API call, simplifying the information search process for 96,000+ users.
- Market-Pool Linkage: Used Golang to automatically link markets and liquidity pools, eliminating manual work and and securely allocating all USD \$130+ million of capital across the exchange.
- Transaction Service & UI: Implemented a microservice in TypeScript to monitor and collect data on CDP transactions and visualize the trading activities using React, serving 35,000 daily visitors.
- Telegram Bot for Blockchain Monitoring: Built a Telegram Bot using TypeScript and Redis to alert the team about stalled Carbon blockchain transactions, increasing the resolution speed by 83%.

Investree Software Engineering Intern Jakarta P2P Fintech Lending May 2022 - Aug 2022

- Investment Dashboard Enhancement: Implemented new features using Vue.js and Kotlin to improve the presentation of financial statements and key metrics, boosting user reviews by 17%.
- Covenant Page Development: Designed and developed a covenant page from scratch using Vue.js and Kotlin, simplifying the contractual agreement process for over 59,000 business loans.
- **RESTful API Development**: Developed and deployed RESTful APIs in **Kotlin** for data querying, processing, and validation from **Postgres** databases, serving the frontend needs of over 100,000 users.

SKILLS

Languages: C++, Python, TypeScript, JavaScript, OCaml, Golang, Scala, Kotlin, PHP, SQL, tCPA

Frameworks: React, Vue.js, Next.js, Express.js, Flask, Laravel, AWS (Lambda, DynamoDB)
